EDUCATION

SIES Graduate School of Technology *Nerul, Navi Mumbai*
Bachelor of Technology (B.Tech), Electronics & Computer Science **Sep 2024 – Present**
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Web Technologies, Computer Networks, Operating Systems.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Solidity, SQL
Frontend: React.js, Next.js, Tailwind CSS
Backend: Node.js, Express.js, FastAPI, REST APIs
Databases & Systems: PostgreSQL, Supabase, Redis, Bull Queue
Web3 & Tools: ethers.js, Wagmi, Viem, MetaMask, Git, Postman

SELECTED PROJECTS

UniData – Blockchain-Powered Dataset Marketplace *Demo ↗* **Jan 2026 – Feb 2026**
Tech Stack: React, TypeScript, FastAPI, SQLAlchemy, Solidity, ethers.js
- Built a hybrid Web2 + Web3 dataset marketplace enabling end-to-end dataset discovery, feasibility analysis, and on-chain purchases.
- Integrated MetaMask and BNB Smart Chain Testnet to execute tBNB-based transactions, smart contract registration, and cryptographic receipt verification.
- Developed backend purchase synchronization and wallet-based entitlement controls, validating blockchain states to restrict dataset access to verified buyers.

Self-Healing Webhook Reconciliation Engine *Demo ↗* **Dec 2025 – Jan 2026**
Tech Stack: Node.js, Express, Redis, Bull, Supabase, Joi
- Architected a fault-tolerant backend pipeline to ingest, validate, and process high-throughput asynchronous webhook events.
- Implemented payload schema validation using Joi and decoupled heavy workloads via **Bull Queue** and **Redis** for reliable retry management.
- Engineered an automated reconciliation mechanism to detect duplicate, delayed, and out-of-order events, eliminating ledger state inconsistencies.

NyxEquities – Tokenized Yield & Drift Terminal *Demo ↗* **Oct 2025 – Nov 2025**
Tech Stack: Next.js, TypeScript, Tailwind CSS, Wagmi, Viem, BSC Mainnet, Venus Protocol
- Engineered an institutional DeFi workstation on BSC Mainnet to resolve off-hours TradFi liquidity blackouts using multi-issuer RWA spread and drift aggregation.
- Implemented zero-revert pre-flight EVM dry-run simulations to validate balance deltas, gas limits, and slippage bounds before dispatching transactions to the mempool.
- Integrated automated weekend capital sweeps into Venus Protocol (˜6.82% APY) and built an HTTP-402 payment protocol for pay-per-signal AI agent micro-oracles.

LEADERSHIP & EXTRACURRICULARS

Technical Coordinator | *Computer Society of India (CSI), SIESGST* **Sep 2024 – Present**

- Drive technical initiatives, organize campus coding workshops, and contribute to the maintenance of chapter web platforms.
- Collaborate with cross-functional student teams to run technical hackathons and technical project exhibitions.

Event Head – RoboSumo | *Technical Team* **2024 – 2025**

- Led technical coordination, arena setup, and match rule enforcement for the RoboSumo robotics competition under the technical team.
